C4 extended: $n = 5$, $k = 4$, target $\varepsilon^{\text{tgt}} = 32$; $\lambda \in \{0, 10^{-2}, \ldots, 10^{6}\}$ (15 values)
(a) coalition slice: U_C and A_t co-monotone in ε_C
coalition own-utility U_C
target harm A_t
$\varepsilon_C^* = 3.17$
symmetric coalition budget ε_C
(b) λ-frontier collapses to one point
target harm A_t
benign optimum = attack optimum
$(U_C^*, A_t^*) = (2.90, 0.73)$
$\varepsilon_C = 64$ (loose)
coalition own-utility U_C
